PROBLEM STATEMENT 3

Rural Entrepreneurship: From Local Opportunity to the Next Evidence-Based Decision

OUR FOCUS-

*One **Kumaoni-speaking hill-sheep entrepreneur**. One seasonal wool batch. One practical question: should she sell raw wool, clean and grade it, test yarn, collaborate—or pause?*

REQUIRED OUTCOME

Exactly one defensible decision—Proceed, Pilot, Modify, Collaborate, Test further or Pause—supported by buyer evidence, full unit economics, route feasibility, rural risks and clearly identified missing information.

Hema Devi is an illustrative ***Kumaoni-speaking entrepreneur*** in a ***village*** near Munsiyari, Pithoragarh. She rears 12 hill sheep, uses a shared **Android phone** with intermittent internet and earns irregular seasonal income. She has **18 kg of May-sheared wool**, no regular buyer or processing machinery, and costly weather-dependent transport. She must protect **₹10,000 for household needs and risk at most ₹1,500 on a test**. Her decision is not simply “Can I make yarn?” but “Which **product, customer, quantity, price and route** are justified by evidence—and what should I safely do next?”

COON NIRNAY IS NOT AN OPEN CHATBOT

Six guided inputs capture context, real costs, buyer actions, wool condition, language and use mode.

Connected AI widgets then:

- define one **product–customer opportunity**;
- rank demand by observed buyer action;
- calculate **labour, losses, logistics, commission, delay** and raw-sale value forgone;
- compare trader, processor, collective and direct routes;
- challenge weak claims before one **Decision Card and 30-day plan**.

DIFFERENTIATORS-

- Kumaoni-assisted, Simple-Hindi and facilitator modes
- Buyer Evidence Ladder
- Household-safe pilot limit
- Decision Challenger
- Facts/assumptions/missing-evidence separation

1 CAPTURE

Context • costs • buyer actions • wool observations • access mode

2 EXAMINE

Opportunity → buyer proof → true earnings
→ route comparison

3 CHALLENGE

Re-check arithmetic, household risk and unsupported claims

4 DECIDE

One official decision + one-page Rural Venture Decision Card

Green references keep one evidence trail across every widget.

10:00 AM — INITIAL BUILD

Problem-specific inputs + first evidence widgets.

12:00 PM — DEVELOPED BUILD

Connected prompts, references, bilingual access, calculations, safeguards and Decision Card.

CHANGE: wool-advice scaffold → evidence-led venture navigator.

The screenshot shows a web application interface for 'new-app-YF8fKzGqg'. The top navigation bar includes a 'Play App' button and a 'Whiskers' icon. The main content area is titled 'How OonNirnay Helps' and lists five evidence-based steps:

- Document your context** — household resources, skills, constraints and safe investment limit
- Calculate true costs** — labour, processing, transport, storage, commissions and payment delays
- Verify demand evidence** — distinguish buyer interest from actual commitments and payment proof
- Compare routes** — trader, processor, collective or direct sale with realistic risks
- Make one defensible decision** — proceed, pilot, modify, collaborate, test further or pause

Below the list, there are two input fields with 'Added' status:

- My Venture and Household Context**: A text area with a list of prompts: 'Please provide: Location (village/block/district), Number and type of sheep, Existing skills (spinning, cleaning, crafts), Equipment available (wheel, storage, scales), Seasonal household income sources, Protected household money (cannot be risked), Maximum safe amount for pilot/experiment'.
- My Wool Batch and Real Costs**: A text area with a list of prompts: 'Raw wool quantity: _____ kg, Current raw wool offer: ₹_____ per kg, Expected cleaning loss: _____%, Labour hours needed: _____ hours, Labour value: ₹_____ per hour, Processing cost: ₹_____, Packaging cost: ₹_____, Transport cost: ₹_____, Storage/spoilage loss: _____%'.

At the bottom, there are two more input fields: 'What Buyers Actually Did' and 'Flock and Fleece Observations', both marked as 'Added'.

The screenshot shows a web application interface for 'Oon Nirnay'. The top navigation bar includes a 'Play App' button and a 'Whiskers' icon. The main content area is titled 'How Oon Nirnay Helps' and features a heading 'From wool in hand to a decision she can defend.'.

Below the heading, there is a paragraph: 'Making wool is not the same as knowing whether it can become a viable business. **Oon Nirnay** helps a rural hill-sheep entrepreneur examine one seasonal wool batch using her actual costs, buyer actions, local constraints and missing evidence.'

It helps her:

- compare raw sale, cleaned and graded wool, a small yarn test and collective selling;
- count labour, transport, packaging, losses, commissions and payment delays;
- distinguish buyer interest from real purchase evidence; and
- receive exactly one next decision: **Proceed, Pilot, Modify, Collaborate, Test further or Pause.**

The final **Rural Venture Decision Card** separates facts, verified information, assumptions, calculations and missing evidence—and turns them into a practical 30-day plan.

At the bottom, there are two input fields with 'Added' status:

- अपने बारे में बताइए। About You**: A text area with a list of prompts: 'मैं हेमा देवी हूँ और मुनस्यारी, पिथौरागढ़ के पास एक पहाड़ी गाँव में रहती हूँ। मैं कुमाऊँनी बोलना पसंद करती हूँ और सरल हिन्दी समझती हूँ। मेरे पास 12 पहाड़ी भेड़ें हैं। मुझे भेड़ पालन और उन की सामान्य देखभाल आती है, लेकिन अपनी प्रसंस्करण मशीन नहीं है। परिवार मदद कर सकता है और सूखी जगह उपलब्ध है। आमदनी मौसमी है तथा कोई भी विकल्प खरीद पक्की नहीं।'.
- आपकी ऊन और खर्चे। Wool & Costs**: A text area with a list of prompts: 'मई की कतराई से 18 kg कच्ची ऊन है। स्थानीय व्यापारी ने ₹70/kg और तुरन्त भुगतान का मौखिक प्रस्ताव दिया; वहीं पहुँचाने में ₹150 लगेगे। सफाई के बाद लगभग 13.5 kg बचने का मेरा अनुमान है—मापा नहीं गया। साफ और छँटी ऊन के लिए ₹170/kg केवल मौखिक बात हुई है, खरीद पक्की नहीं। सफाई: 12 घंटे × ₹40; सामग्री ₹180; पैकिंग ₹120; परिवहन ₹450;'.

BUILD TOOLS

ChatGPT Plus — scope audit, prompt refinement and test design

AWS PartyRock / Amazon Bedrock — working multi-widget prototype

Claude 4.5 Sonnet — all analytical and final-output widgets

MODEL SETTINGS

Opportunity: T 0.2 / Top P 0.85 Buyer proof: 0.1 / 0.80

Economics: 0.0 / 0.70 Routes: 0.1 / 0.80 + web search

Decision Challenger: 0.1 / 0.75 + deep thinking

Decision Card: 0.1 / 0.75 + deep thinking

PROMPT RULES THAT SHAPED THE APP

- Use only supplied or cited evidence; never invent prices, quantities, commitments or schemes.
- Separate entrepreneur facts, verified information, assumptions, calculations and missing evidence.
- Count her labour and the raw-sale value forgone; revenue is not profit.
- Return exactly one official decision; use “Test further” when a critical gate fails.
- Adapt wording to the selected language and entrepreneur/facilitator mode.

SUBMISSION RECORD: OonNirnay_Final.json (attached)

1 TRUE COST CHECK — PASS

Raw sale: $18 \times ₹70 - ₹150$ transport = ₹1,110 net.

Cleaned sale: $13.5 \times ₹170 - ₹1,310$ full cost = ₹985 net.

Result: the higher selling price is not mistaken for higher earnings.

2 BUYER-EVIDENCE CHECK — PASS

Trader's verbal offer = weak evidence; processor's 1 kg sample request = stronger interest but not a purchase commitment; collective terms = unverified.

Result: the app asks for written price, deductions, quantity and payment date.

3 MISSING-DATA CHECK — PASS

Unknown yarn yield, processing cost, buyer price and collective terms are not calculated or invented.

4 DECISION GATE — PASS

Demo output: PILOT — send/test the 1 kg cleaned sample and secure written terms before processing the full batch.

*KNOWN LIMITATION

Kumaoni output is assisted, not a certified translation; market and scheme information still requires source verification.

RISK

CONTROL

Invented market facts	Source, geography, eligibility and date required; otherwise “not verified”
Weak demand treated as sales	Buyer Evidence Ladder based on observed action
Financial harm	Labour, delayed payment, raw-sale opportunity cost and safe pilot budget counted
Missing numbers	No estimate hidden as fact; calculation marked incomplete
Animal-health harm	Observations and referral only—no diagnosis or treatment
Mislabelled wool quality	No pashmina, premium-grade or certified claim without independent evidence
Language exclusion	Kumaoni-assisted + Simple Hindi + English; entrepreneur/facilitator mode
Shared-device privacy	No bank details or exact address; clear inputs after assisted use

The final card visibly separates: entrepreneur facts • verified external information • assumptions • calculations • missing evidence • reasoning.

DISTINCTIVE VALUE

- Buyer Evidence Ladder converts “people liked it” into a purchase test.
- True economics includes her time, losses, payment delays and the value of the safe raw-sale option.
- Decision Challenger audits the attractive answer before the final card is generated.
- Wool-condition observations protect business quality without pretending to certify fibre or diagnose animals.

RURAL ACCESS

Kumaoni-assisted explanations • Simple Hindi • voice-enabled inputs • facilitator mode • text-first low-bandwidth design • shared-device privacy practice

MEASURABLE IMPACT

Evidence level captured | all required cost fields exposed | break-even/net earnings produced when possible | unsupported claims blocked | **one 30-day action completed within ₹1,500**

FEASIBLE AND REUSABLE

Built entirely in PartyRock; the same evidence workflow **can be reused for the next seasonal batch** and adapted for other rural products without changing its decision discipline.

ONE BATCH → ONE EVIDENCE TRAIL → ONE DEFENSIBLE NEXT DECISION

- ✓ Public PartyRock app released and link access enabled
- ✓ Official PS3 scope and specific entrepreneur preserved
- ✓ Opportunity, demand, economics, route, risk, support and inclusive-access requirements covered
- ✓ Six official decisions enforced
- ✓ One-page Rural Venture Decision Card generated
- ✓ JSON contains final widget names, references, prompts and settings
- ✓ Demo evidence and objective calculations documented
